ROBUST SIGNAL PROCESSING FOR WIRELESS SYSTEMS

A Thesis Submitted to
the Graduate School of Engineering and Sciences of
İzmir Institute of Technology
in Partial Fulfillment of the Requirements for the Degree of

MASTER OF SCIENCE

in Electrical and Electronics Engineering

by
Çağrı Şükrü ÖZDOĞAN

October 2026
İZMİR

We approve the thesis of Çağrı Şükrü ÖZDOĞAN

Examining Committee Members:

Prof. Dr. Committee MEMBER 1
Electrical Engineering, Example University

Prof. Dr. Committee MEMBER 2
Electrical Engineering, Example University

Prof. Dr. Committee MEMBER 3
Electrical Engineering, Example University

Prof. Dr. Committee MEMBER 4
Electrical Engineering, Example University

Prof. Dr. Committee MEMBER 5
Electrical Engineering, Example University

10 October 2026

Prof. Dr. İlknur ÇİÇEK
Supervisor
Electrical and Electronics Engineering,
IZTECH

Assoc. Prof. Gökhan IŞIK
Co-Supervisor
Electrical and Electronics Engineering,
IZTECH

Prof. Dr. Ayşe YILMAZ
Head of the Department
Electrical and Electronics Engineering

Prof. Dr. Deniz KAYA
Dean of the Graduate School of
Engineering and Sciences

ACKNOWLEDGMENTS

I thank my supervisor and colleagues for their support.

ABSTRACT

ROBUST SIGNAL PROCESSING FOR WIRELESS SYSTEMS

This verification specimen studies reproducible signal processing in wireless systems. The model compares measured observations with theoretical predictions and discusses limitations. The proposed method improves robustness while preserving computational efficiency. These sentences are deliberately long enough to test line wrapping, justification and paragraph indentation across the editor, exported PDF and Microsoft Word.

ÖZET

KABLOSUZ SİSTEMLER İÇİN DAYANIKLI SİNYAL İŞLEME

Bu doğrulama örneğinde kablosuz sistemlerde sinyal işleme incelenmektedir. Ölçüm sonuçları kuramsal tahminlerle karşılaştırılmış; yöntem, bulgular ve sınırlılıklar açıklanmıştır. Türkçe karakterler: ÇĞİÖŞÜ çğıöşü.

PREFACE

This thesis combines three related articles.

CHAPTER 1

INTRODUCTION

This verification specimen studies reproducible signal processing in wireless systems. The model compares measured observations with theoretical predictions and discusses limitations. The proposed method improves robustness while preserving computational efficiency. These sentences are deliberately long enough to test line wrapping, justification and paragraph indentation across the editor, exported PDF and Microsoft Word.

This verification specimen studies reproducible signal processing in wireless systems. The model compares measured observations with theoretical predictions and discusses limitations. The proposed method improves robustness while preserving computational efficiency. These sentences are deliberately long enough to test line wrapping, justification and paragraph indentation across the editor, exported PDF and Microsoft Word.

1.1. Research Method

This verification specimen studies reproducible signal processing in wireless systems. The model compares measured observations with theoretical predictions and discusses limitations. The proposed method improves robustness while preserving computational efficiency. These sentences are deliberately long enough to test line wrapping, justification and paragraph indentation across the editor, exported PDF and Microsoft Word.

CHAPTER 2

CONCLUSIONS

This verification specimen studies reproducible signal processing in wireless systems. The model compares measured observations with theoretical predictions and discusses limitations. The proposed method improves robustness while preserving computational efficiency. These sentences are deliberately long enough to test line wrapping, justification and paragraph indentation across the editor, exported PDF and Microsoft Word.
